### Product Data

Kimtech™ G3 white ambidextrous nitrile gloves are ideal for handling precision tools in microelectronics, semiconductor, optical and non-sterile pharmaceutical applications. For the highest demands on precision, protection and performance. The high-quality nitrile gloves provide seamless protection where and when it is needed and are suitable for ISO Class 3 or higher cleanroom environments. The nitrile polymer material is designed for fit and reliability and features textured fingertips for improved grip and excellent waterproofing with low risk of needlesticks. They are ambidextrous and feature a rolled-edge cuff for strength and ease of donning, allowing the wearer easy access without tearing the material. Our non-sterile nitrile cleanroom gloves are also latex, silicone and powder free. Without natural rubber latex and vulcanising agents, the risk of reactions with Type I is reduced and the wearer and application are protected. These gloves are repeatedly washed in deionised ultrapure water to ensure uniform control of particles and extractables. The gloves are labelled PPE Category III in accordance with Regulation (EU) 2016/425 and Regulation 2016/425 as amended in the UK. The gloves are double wrapped in cleanroom grade polythene with an insert in the box for easy integration into your processes.

- Conformité garantie : EPI catégorie III selon le règlement (UE) 2016/425 et le règlement 2016/425 tel qu'applicable au Royaume-Uni, EN ISO 374-1 type B (KPT) protection contre les projections de produits chimiques, EN 374-4 résistance à la décomposition chimique, EN ISO 374-5 protection contre les micro-organismes et les virus. Certificat d'analyse disponible en ligne
- Les gants jetables en nitrile, leaders du secteur, offrent une protection, une propreté et une qualité inégalées et sont fournis dans des emballages prêts pour les salles blanches afin de minimiser les déchets.
- La construction en nitrile permet d'obtenir des produits plus résistants et plus fins que les gants en latex et offre une meilleure protection contre une grande variété de contaminants, y compris les virus, les micro-organismes et les projections de produits chimiques.
- Les bouts de doigts texturés améliorent la préhension et la sensibilité tactile pour des

processus plus sûrs et plus efficaces.

- Les manchettes à bord roulé augmentent la résistance des gants, réduisent le risque de déchirure et améliorent leur durabilité. Elles réduisent également l'enroulement, ce qui facilite l'habillage et le déshabillage.
